

Prayers to the Devas of Radioactive Elements

By Michael Pilarski

Within the next two weeks the workers at the Fukushima plant are going to try to remove spent fuel rods that are suspended on damaged racks. They weigh about 400 tons all together and contain radiation equivalent to 14,000 times the amount released by the Hiroshima atomic bomb. This is very dangerous work, not just for the workers, or Japan, but for the entire world. There's a media blackout about the gravity of the situation (and has been for two years) but right now I believe that prayers are needed more than ever.

The seriousness of it extends far beyond the removal of the airborne fuel rods, but this one act of removal is extremely dangerous and could impact all of us within a rather short amount of time. I believe it needs out utmost attention and prayers. I would like to ask that we join together in daily prayers* for the next month focusing on stabilization of the plant, of the fuel rods, of the workers safety and fair working conditions, and for their utmost competence in facing this daunting global responsibility. A request that p prayers focus on the world community coming together, encouraging the best nuclear specialists and global engineers to step forward in a unified manner, bringing their expertise and best plans in stabilizing and containing leaks and damage to the plant.

Lastly, may we pray for stabilization for the entire nuclear plant, including the end of radioactive leaking and contamination of the Waters, and for the renewed health of our Pacific Ocean, and all marine life there.

All thoughts on how to add or build onto this multi-faceted prayer for stabilization, safety, and protection - of the plant, workers, families, waters, marine life, and global community.

Amaji has asked us to pray for a successful conclusion of the removal of the fuel rods at Fukushima's crippled reactor pools. There is a potential for a catastrophic explosion during this process which would cause a huge emission of radioactive elements into the whole world.

Here is one such prayer, which you can add to as you see fit.

Prayer to the Devas of Radioactive Elements

"I pray to the great devas of the radioactive elements, uranium, plutonium and others that they will closely oversee the removal of the Fukushima fuel rods without great release of radioactivity. Furthermore, I pray that they will closely oversee Fukushima and all the other nuclear power plants until they can be closed and safely dismantled. I include here all the nuclear weapons on the planet as well. I appreciate the natural role that the radioactive elements play on the Earth. It is humans that have concentrated the radioactive elements for their own ends. May you assume your natural roles and not be allowed to be used for evil purposes or to greatly harm the human race and other species.

I ask my guides to carry this prayer up to the highest levels they can reach and so on until this prayer reaches the ears of the highest devas of the radioactive elements and to the ears of the great deva which overlights all of humanity. I send this prayer also to the ears of the great Overlighting Logos of the planet Earth. Sanat Kumara, Gaia or whatever other names may be used for this great Being that ensouls our planet.

Thank you for hearing our prayers. So be it.”

Of course we should also be praying to all of the spiritual allies of the human race.

*Perhaps the prayers could begin everyday at 10:00 am Pacific time, 11:00 Colorado, 12:00 noon Chicago, 1:00 East Coast time. Other suggestions?

Protecting Yourself from Radiation

While researching nascent iodine for protection against radioactivity I came across the following article on protecting yourself from radiation and we should probably all read it closely at this time. This article is a good one to read regarding how to reduce radiation effects. The article recommends many of their own products and buying them all would be expensive. The article will give you an idea of some things you can do with local resources so I recommend it in that light. Much of the article is good health recommendations whether there is a larger Fukushima event or not.
